Patent Claims

2.0

- 1. A protocol device in a protocol system for transmitting messages,
- 5 characterized in that
 the protocol device uses the protocol information which
 is contained in a monitoring message received by it to
 determine whether this monitoring message contains
 information which is newer than the current information
 10 state in the protocol device, and updates, or does not
 update, its information state on the basis of this
 decision.
- 2. The protocol device as claimed in claim 1, characterized in that said protocol device additionally successively numbers those monitoring messages for which it cannot reconstruct the sequence of the received monitoring messages on the basis of said protocol information.

3. The protocol device as claimed in claim 1 or 2, characterized in that the monitoring messages are messages for flow monitoring.
